wherein each of B, B', B" represents a [purine,] 7-deazapurine, or pyrimidine moiety covalently bonded to the C¹'-position of the sugar moiety, provided that whenever B, B' or B" is [purine or] 7-deazapurine, the sugar moiety is attached at the Nº-position of the [purine or] 7-deazapurine, and whenever B, B' or B" is pyrimidine the sugar moiety is attached at the N¹-position of the pyrimidine;

wherein A comprises at least three carbon atoms and represents at least one component of a signalling moiety capable of producing a detectable signal;

wherein B and A are attached directly or indirectly through a linkage group, said linkage group not interfering substantially with the characteristic ability of said compound to hybridize with said nucleic acid or of A to be detected;

wherein [if B is purine, A is attached to the 8-position thereof,] if B is 7-deazapurine, A is attached to the 7-position thereof, and if B is pyrimidine, A is attached to the 5-position thereof;
